JANTEX DISCHARGE WHITE EZ

DESCRIPTION: Jantex Discharge White EZ is a super bright, ready to use White for Discharge Printing. It is an opaque water base white.

APPLICATION: Add 3 – 6% Jantex Parolite directly into Jantex Discharge White EZ , mix well with drill or high speed homogenization. For added mixing aid, mix the Parolite into a very small amount of water and then add to the Discharge Snow White.   Jantex Discharge White EZ can also be used "as is" for a bright print white.

SCREEN MESH: 60 - 160

STENCIL: Water resistant emulsion is highly recommended with the addition of a hardener.   It is recommended that screens be left flooded during any pauses in printing.

MODIFIERS: If needed to reduce ink drying in screens, up to 5% Jantex Lube JT can be added to the white. A small amount of water can also be used but be careful not to reduce the concentration of white by adding to much water.

CLEAN-UP: Clean up with water.

STORAGE: Keep from freezing and away from direct sunlight or heat. Store between 55˚and 85˚ F. Keep lid tightly secured when not in use.

SAFETY: Keep out of the reach of children. Always us protective eyewear and clothing when mixing color. Refer to Material Safety Data Sheet for additional information.
