

## JANTEX WATERBASE MATCHING SYSTEM

Jantex Inks has developed a **water base matching system** with software that can allow you to match to virtually thousands of colors within its spectrum.

With the new JMS formulation software program you can color match to both light and dark garments using either our **JMS Extender Base** or **JMS DISCHARGE BASE**. You can create and save custom made JMS colors. Additionally the software can automatically add auxiliary products like fixer, softener as well as the parolite needed for discharge.

JMS includes 10 primary colors along with 2 auxiliaries for added color range. The colors are as follows:

|                |                 |
|----------------|-----------------|
| JMS BLACK 02   | JMS RED 08      |
| JMS BLUE 03    | JMS SCARLET 09  |
| JMS BLUE 04    | JMS VIOLET 10   |
| JMS GREEN 05   | JMS YELLOW 11   |
| JMS MAGENTA 06 | JMS FLS PINK A1 |
| JMS ORANGE 07  | JMS ROYAL A2    |

The JMS System is available in a convenient kit which includes the software, all 12 colors, JMS Extender Base and Discharge Base as well as all auxiliary components. The kit can also be purchased with a high quality scale for a great price.
